

VRP-W provides a secure and automatic bi-directional link between your VRP system and your website. Customer Accounts are created in your VRP for review and accepted when a client signs up via the website, creating either payment batches or Work Orders. No new commands to learn and templates are generated in your existing VRP systems.

You can utilize VRP-W as a new website or as an interactive extension to your existing website.

VRP Interface Process

- Receives and creates new customer accounts
- Sends new/changed client details to Web server
- Receives service requests and generates Work Order/Tray items
- Communication/out uses standard internet protocols

VRP-W Website

- Allows customers to create or change their service
- Books service and emails confirmation
- Extracts information for generating VRP Work Orders
- All information kept in summary form so no personal or company information can be viewed
